| | · | Claims | NO |

2. Citations and explanations (Rule 70.7)

Claims 1-7 meet the criteria set forth in PCT Article 33(2)-(4) for novelty, inventive step and industrial applicability. The prior art published before the priority date does not disclose a leash comprising an elongate strap with a collar connector and a container connector, a container of flexible material and triangular shape with a strap connector at its apex and a leash handle on an opposite side opposite the apex, the leash handle being parallel to the opposite side, and a slideable connector adapted to engage with the container connector.

Object

15

20

25

30

35

It is an object of the present invention to provide an animal leash which will at least go some
way toward overcoming disadvantages of known animal leashes, or to at least provide the
public with a useful alternative.

Summary of the Invention

Accordingly in one aspect the invention may broadly be said to consist in a leash comprising an elongate strap having a first end and a second end, the first end having a collar connector for connection to an animal collar, the second end having a container connector, a container being constructed from a substantially flexible material and having a substantially triangular shape, and including a strap connector provided at or adjacent to an apex of the triangular shape for connection to the container connector, and the container including a leash handle at an opposite side of the triangular shape substantially opposite the apex, the leash handle being disposed substantially parallel to the opposite side and being adapted to be grasped by the hand of the user, and wherein the leash includes a slideable connector slideably mounted about the strap so as to be capable of moving along the strap, the slideable connector being adapted to engage with the container connector to allow the leash to be attached about a fixed object without the container or handle being attached to the leash.

Preferably the leash includes a collar having a strap connector adapted to engage the collar connector.

Preferably the collar includes a collar fastening means such as a buckle.

Preferably the collar includes a fastening loop such as a "D" ring for containing the tongue of the collar and/or for attaching registration tags, identification tags and such devices as Pet BlinkersTM or safety lights.

Preferably the collar strap connector is fixedly mounted on the collar in a location substantially opposite the fastening means.

10

15

25

- 1. A leash comprising an elongate strap having a first end and a second end, the first end having a collar connector for connection to an animal collar, the second end having a container connector, acontainer being constructed from a substantially flexible material and having a substantially triangular shape, and including a strap connector provided at or adjacent to an apex of the triangular shape for connection to the container connector, and the container including a leash handle at an opposite side of the triangular shape substantially opposite the apex, the leash handle being disposed substantially parallel to the opposite side and being adapted to be grasped by the hand of the user, and wherein the leash includes a slideable connector slideably mounted about the strap so as to be capable of moving along the strap, the slideable connector being adapted to engage with the container connector to allow the leash to be attached about a fixed object without the container or handle being attached to the leash.
- 20 2. A leash as claimed in claim 1 including a collar having a strap connector adapted to engage the collar connector.
 - 3. A leash as claimed in claim 2 wherein the collar includes a fastening loop for attaching one or more of: a registration tag; an identification tag; a light emitting device.
 - 4. A leash as claimed in claim 3 wherein the collar includes a collar fastening means for fastening the collar about the animal, the fastening means being provided substantially adjacent to the fastening loop.
- 5. A leash as claimed in claim 3 wherein the collar strap connector is fixedly mounted on the collar in a location substantially opposite the fastening loop.
 - 6. A leash as claimed in claim 4 wherein the collar strap connector is fixedly mounted on the collar in a location substantially opposite the fastening means.
 - A leash substantially as herein described with reference to Figure 4 of the accompanying drawings.
